

PROJECT PROPOSAL

QUICKDINES TRANSIT DINING ECOSYSTEM

Submitted By: Mehaboob Software Solutions

EXECUTIVE SUMMARY

Quickdines aims to revolutionize passenger dining services by enabling travelers to order food directly from buses through a QR-code-based ordering system. The platform will connect passengers, restaurant partners, drivers, support teams, and administrators through a unified ecosystem.

Mehaboob Software Solutions proposes the development of a complete digital ecosystem consisting of a Dynamic Customer Web and Android Portal, Restaurant Partner Control panel, Driver Control panel, Support Team Management Panel, and Admin Panel.

The solution will provide real-time order management, bus tracking, restaurant coordination, payment processing, analytics, and administrative control.

PROJECT MODULES

1. Customer (QR-Based Ordering System)

Passengers can scan a QR code available inside the bus and place orders directly from their mobile browser without downloading any application.

Features:

- Dynamic QR Code System
- Bus-specific menu display
- Time-based menu switching (Dinner, Snacks & Mid-way)
- Food Category Management
- Cart & Checkout System
- Online Payment Gateway Integration
- Order Confirmation & Real-Time Status
- Mobile Responsive Design

Benefits:

- Easy ordering process
- Faster customer experience
- Increased order conversion

2. Restaurant Partner Android Application

Restaurant partners can manage incoming orders and food preparation activities.

Features:

- Restaurant Login & Authentication
- Order Dashboard & Live Notifications

Benefits:

- Real-time restaurant operations
- Improved order handling

- Bus ETA Monitoring
- Menu & Availability Controls
- Order Acceptance & Rejection
- Revenue Dashboard & Sales Analytics
- Wallet Management & Settlement Tracking
- Profile Management
- Better revenue monitoring
- Easy business management

3. Driver Partner Android Application

Drivers act as the transportation link between passengers and restaurants.

Features:

- Driver Registration & Login
- GPS Location Sharing & Route Monitoring
- Bus Assignment Management
- Order Notifications & Delivery Tracking
- Wallet System & Incentive Management
- Push Notifications

Benefits:

- Automated order coordination
- Driver incentive management
- Better communication with restaurants

4. Support Team Management Panel

Dedicated panel for operations and customer support teams.

Features:

- Support Team Login & Order Monitoring
- Delay & Cancellation Management
- Order Verification & Refund Processing
- Complaint & Ticket Management
- Restaurant, Driver & Bus Verification

Benefits:

- Centralized operations
- Faster issue resolution
- Better customer satisfaction

5. Super Admin Panel

Complete control over the entire Quickdines ecosystem.

Features:

- Dashboard Overview
- User, Restaurant, Driver & Bus Management
- Financial Monitoring & Withdrawal Approvals
- Partner Approval Workflow
- Revenue Analytics & System Settings
- Security Controls, Reports & Insights

Benefits:

- Complete ecosystem control
- Financial transparency
- Operational efficiency

PAYMENT GATEWAY INTEGRATION

The platform will support seamless payment handling across multiple options:

- UPI Payments
- Razorpay Integration
- Credit Card & Debit Card Payments
- Net Banking
- Wallet Payments

TECHNOLOGY STACK

Component	Technologies
Frontend	HTML5, CSS3, Bootstrap 5, JavaScript
Backend	PHP 8, MySQL Database, REST APIs
Mobile App	Android Application
Hosting	Linux Hosting / VPS Server

PROJECT TIMELINE

Phase	Description	Duration
Phase 1	UI/UX Design	1 Week
Phase 2	Web Portal Development	2 Weeks
Phase 3	Android Application Development	3 Weeks
Phase 4	Admin & Support Panels	2 Weeks
Phase 5	Testing & Deployment	1 Week
Total Estimated Duration		8 – 10 Weeks

DELIVERABLES

✓ Customer Ordering Web Portal

✓ Restaurant Partner Android App

✓ Driver Partner Android App

✓ Support Team Management Panel

✓ Super Admin Dashboard

✓ Payment Gateway Integration

✓ Source Code & Database Setup

✓ Testing, Deployment & Technical Support

TERMS & CONDITIONS

1. Any additional features requested beyond the approved scope will be charged separately.
2. We provide SMS Gateway (Up to 300 to 500 OTP), Google Maps API (Free version; if paid, extra charges apply), Domain (Provided by client), Hosting (Charges applicable from next year), and Play Store fees are included.
3. Project ownership, source code, and mobile applications will be transferred upon full payment completion.

REFUND POLICY

1. Once project design, development, database creation, UI/UX work, coding, or any implementation activity has commenced, no refund shall be provided under any circumstances.
2. If the client cancels the project after commencement, all payments made up to that point shall be forfeited.
3. Any completed work, source code, designs, database structures, APIs, and project assets developed during the project shall remain the property of Mehaboob Software Solutions until full payment is received.
4. No refunds will be provided for change of mind, business closure, lack of usage, project delays caused by the client, or feature misunderstandings after project approval.
